# Building secure webapplications with no-code

Applications often deal with **sensitive user data** such as personal information. It is the **responsibility** of the application **developer** to ensure that this data is protected from unauthorized access, theft, or misuse. Finding enough resources with sufficient amount of knowledge can be **very challenging** in today's market.

NoCode-X offers a **solution** to this problem by offering a no-code platform that developers can use to **easily & quickly** create **secure** webapplications.

Developers can build applications up to **70% faster** compared to traditional development! While features such as auto-encryption at rest, auto-auditing, TLS & basic security configuration such as: CSP headers, DNSSEC, HSTS, ... make sure the applications they built are **secured**!

Endless possibilities with NoCode-X

We have a huge library of predefined no-code components ready for use in your application. These components will allow you to build a stunning UI in a matter of minutes instead of weeks.

Additionally we provide over 200 logic building blocks for you to use within your application. Just drag & drop your logic into place & done! Piece of cake!
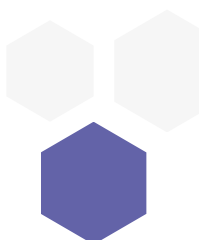

Do it yourself or have it built!

Do you want to give it a go yourself? Contact us and we will provide you with an account. Use our documentation to get up to speed with our platform or let us take you on a detailed tour through all functionalities of NoCode-X.

No time, no resources? No problem! No worries, we've got your back. **We can create your application** for you! We facilitate your product development from beginning to end. This includes: UX, Development, Testing, Release & Maintanance. We deliver the highest of quality and a solid security basis. Do not hesitate to contact us for more details.
